

METHOD FOR FEATURE TRANSFER IN A TELECOMMUNICATION
NETWORK

Abstract of the Disclosure

5

A network (30) of a telecommunication system (100)
receives requests (31) for feature transfers from one
user (10) to another user (20). In addition, network
initiated feature transfer marks a call agent (61) for
10 feature transfer. Subsequent call attempts from a call
agent (51) are redirected (63) by the network.
